

HALIMA ABDIRIZAK MOHAMED

Cybersecurity Student | SOC Analyst

Bekasi, Indonesia • +62 817 9727 975 • halimamohamedabdirizak@gmail.com • github.com/hal-imaxabdi • [LinkedIn](#)

PERSONAL PROFILE

Cybersecurity-focused Informatics student with hands-on experience in security operations, secure system design, and threat detection, demonstrated through a self-built SOC homelab and several full-stack applications built with OWASP-aligned security controls. Holds certifications in Google Cybersecurity, AWS Security, IBM Incident Response, freeCodeCamp Information Security, and Google AI. Seeking a cybersecurity internship to apply skills in monitoring and incident response.

EDUCATION

President University — Bachelor of Informatics (Cybersecurity Specialization)

2024 – 2027

GPA: 3.71 | Relevant Coursework: Web Development, Network Security, Cryptography, Risk Management, Database Systems

EXPERIENCE

SOC Homelab | Attack Simulation & Detection Lab

Personal Lab

- Simulated real-world attacks using Kali Linux against a Windows environment; analyzed security and system logs to identify anomalous behavior.
- Practiced incident-investigation workflows, including triage, root-cause analysis, and documentation of response procedures.
- Built virtual infrastructure with VirtualBox/VMware to replicate an enterprise monitoring environment.

AI-Assisted Security Audit Platform | Risk Assessment System

Academic Project

- Developed an AI-powered platform for structured cybersecurity risk assessments guided by the NIST Cybersecurity Framework (CSF).
- Implemented risk scoring, vulnerability tracking, and audit-reporting workflows using database-driven RBAC systems.
- Integrated AI assistance to guide audit steps and generate actionable remediation recommendations.

Vulnerable vs. Secure Web App | Brute-Force Attack Simulation

Python / Flask

- Built a Flask application simulating brute-force attacks on a login system, contrasting vulnerable and hardened implementations.
- Implemented industry-standard defenses, including BCrypt password hashing, JWT session management, rate limiting, and CSRF protection.
- Designed the project as an educational tool comparing attack surfaces before and after security hardening.

SEMIS — Secure Employee Management Information System

Full-Stack (MERN)

- Developed a full-stack HR platform for 150 employees with three RBAC roles, including secure authentication, audit logging, and access controls.
- Structured MongoDB schemas for attendance, payroll, and leave; documented all API endpoints and system architecture.

SKILLS

Technical Skills

Security: SIEM concepts, log analysis (Windows & Linux), OWASP principles, RBAC, secure authentication, vulnerability tracking, incident response, penetration testing fundamentals

Programming: Python, JavaScript (Node.js, React.js), C++, HTML/CSS, REST APIs

Tools: Wireshark, Nmap, Burp Suite, VirtualBox, VMware, Git/GitHub, MongoDB Atlas

Frameworks: Flask, Express.js, JWT, CSRF protection, BCrypt

AI / Audit: AI-assisted risk assessment, NIST CSF framework, structured audit workflows, applied AI fundamentals

ACHIEVEMENTS & CERTIFICATIONS

- Google Cybersecurity Professional Certificate
- AWS Security Fundamentals
- freeCodeCamp Information Security Certification
- Google AI Certificate
